Title: SEMICONDUCTOR GAS SENSING
Filed: 11/13/01
Inventor(s): Williams et al
Attorney(s): Lucci

DETAILED ACTION

REJECTIONS OVER PRIOR ART UNDER 35 U.S.C. § 103:

1. The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

"A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person."

2. Claims 1 and 3 are rejected under 35 U.S.C. § 103 as being unpatentable over Williams et al '662, hereinafter Williams, in view of Baker et al, hereinafter Baker.

Regarding Claim 1; in the abstract, Williams teaches a semiconductor sensor that changes resistance in response to ozone. Williams teaches pulsed operation of the sensor in Fig 8, but fails to teach returning to a working temperature at the conclusion of the pulse. At Col 14, Li 20-27, Baker teaches regeneration at a temperature 450°C followed by a return to working temperatures. Baker teaches a working temperature

range of 200°C to 500°C at Col 4, Li 13-14. It would have been obvious to one of ordinary skill in the art at the time of the invention to operate the Williams' sensor using Baker's teaching because Baker teaches that this will adequately regenerate the sensor.

Regarding Claim 3; in the figures, Williams analyses the resistance as a function of time.

FINAL ACTION:

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a).

A SHORTENED STATUTORY PERIOD FOR RESPONSE TO THIS FINAL ACTION IS SET TO EXPIRE THREE MONTHS FROM THE DATE OF THIS ACTION. IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. § 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.

REMARKS:

4. Applicant's arguments filed 10/28/02 have been fully considered but they are not persuasive.

Applicant argues that Baker is non-analogous art to that of Williams because Baker is concerned with creating hydrocarbons from a gaseous feed-stream, and Williams detects ozone. Applicant and Williams both employ a WO₃ sensor. Despite Baker's overall goal, the

quoted sections of Baker deal with the manufacture of a WO₃ sensor. It is natural to learn how to make these sensors in order to use them.
